

## How to find the location/path of any command or installed package ?

- There are two commands to find the location/path of any command or installed package in Linux
- They are :
  - `which`
    - Syntax: `which <anyCommand/Package>`
  - `command`
    - Syntax: `command -v <anyCommand/Package>`
- Note: prefer only 'command' because it is a built-in command
